One of the biggest contributors to aging is the loss of Collagen. Collagen is an important protein that you need in order to stay pain free, feel vibrant, and look youthful. Collagen is the most common and abundant of your body's proteins. Your body's ability to produce collagen decreases around the age of thirty. This causes a continuous decline of the collagen levels in the body. This is what leads to rigidity and weakness in your bones, cartilage, and other body parts, as well as aches and pains. Insufficient collagen gives you wrinkles and prevents healthy hair growth. If you lack amino acids that combine to form collagen, your body's cells can't produce enough of it. Do yourself a favor and try Solutions4 Collagen Plus... Test it for yourself! You will feel and see the difference.
